CS 161 Computer Security

Discussion 4

Question 1 IND-CPA

When formalizing the notion of confidentiality, as provided by a proposed encryption scheme, we introduce the concept of indistinguishability under a chosen plaintext attack, or IND-CPA security. A scheme is considered *IND-CPA secure* if an attacker cannot gain any information about a message given its ciphertext. This definition can be defined as an experiment between a challenger and adversary, detailed in the diagram below:

Consider the one-time pad encryption scheme discussed in class. For parts (a) - (c), we will prove why one-time pad is not IND-CPA secure and, thus, why a key should not be reused for one-time pad encryption.

| Q1.1 | With what messages M_0 and M_1 should the adversary provide the challenger? |
|------|--|
| | |
| | |
| Q1.2 | Now, for which message(s) should the adversary request an encryption from the challenger during the query phase? |
| | |

| Q1.3 | The challenger will now flip a random bit $b \in \{0, 1\}$, encrypt M_b , and send back $C = \text{Enc}(k, M_b) = M_b \oplus k$ to the adversary. How does the adversary determine b with probability $> \frac{1}{2}$? |
|------|--|
| | |
| Q1.4 | Putting it all together, explain how an adversary can always win the IND-CPA game with probability 1 against a deterministic encryption algorithm. Note: Given an identical plaintext, a deterministic encryption algorithm will produce identical ciphertext. |
| | |
| | |
| Q1.5 | Assume that an adversary chooses an algorithm and runs the IND-CPA game a large number of times, winning with probability 0.6. Is the encryption scheme IND-CPA secure? Why or why not? |
| | |
| | |

Question 2 Block Ciphers I

Consider the Cipher feedback (CFB) mode, whose encryption is given as follows:

$$C_i = egin{cases} ext{IV}, i = 0 \ E_K(C_{i-1}) \oplus P_i, ext{ otherwise} \end{cases}$$

Q2.1 Draw the encryption diagram for CFB mode.

| O2.2 | What is the | decryption | formula | for CFB | mode? |
|------|-------------|------------|---------|---------|-------|

| - 1 | |
|-----|--|
| - 1 | |
| | |
| | |
| | |
| | |
| | |
| - 1 | |
| - 1 | |
| - 1 | |
| | |
| _ | |

- Q2.3 Select the true statements about CFB mode:
 - ☐ Encryption can be paralellized
- ☐ The scheme is IND-CPA secure
- ☐ Decryption can be paralellized
- Q2.4 What happens if two messages are encrypted with the same key and IV? What can the attacker learn about the two messages just by looking at their ciphertexts?

| Q2.5 | If an attacker recovers the IV used for a given encryption, but not the key, will they be able to decrypt a ciphertext encrypted with the recovered IV and a secret key? | | | | |
|------|--|--|--|--|--|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

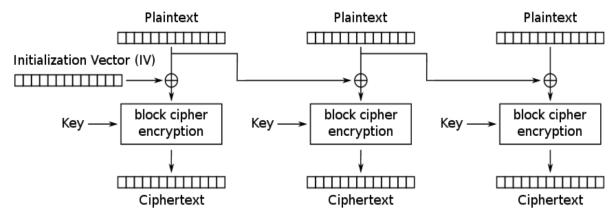

Question 3 Block Ciphers II

Consider the following block cipher mode of operation.

 M_i is the *i*th plaintext block. C_i is the *i*th ciphertext block. E_K is AES encryption with key K.

$$C_0 = M_0 = IV$$

$$C_i = E_K(M_{i-1} \oplus M_i)$$

- Q3.1 Which of the following is true about this scheme? Select all that apply.
 - \square (A) The encryption algorithm is parallelizable
 - \square (B) If one byte of a plaintext block M_i is changed, then the corresponding ciphertext block C_i will be different in exactly one byte
 - \square (C) If one byte of a plaintext block M_i is changed, then the next ciphertext block C_{i+1} will be different in exactly one byte
 - \square (D) If two plaintext blocks are identical, then the corresponding ciphertext blocks are also identical
 - \square (E) The encryption algorithm requires padding the plaintext
 - \square (F) None of the above

| Q3.2 | True or False: If the IV is always a block of all 0s for every encryption, this scheme is IND-CPA secure. Briefly justify your answer. | | | | | |
|------|--|-----------|-----------------|------------------|-------------------|----------------|
| | (G) True | (H) False | (I) — | (J) — | (K) — | (L) |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| Q3.3 | TRUE or FALS secure. Justify | | andomly generat | ed for every enc | ryption, this sch | eme is IND-CPA |
| | (A) True | (B) False | (C) — | (D) — | (E) — | (F) — |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
